DETAILED ACTION

Status of Application, Amendments and/or Claims

The amendment of 18 April 2002 (Paper No. 13) has been entered in full. Claims 1-4, 8-9, 11-12, 15-17, 19, 21, and 24-28 are amended.

Election/Restrictions

Applicant's election with traverse of Group I, claims 1-18, drawn to a method for potentiating morphogen activity, for promoting neuronal cell growth, for treating a disorder characterized by neuronal cell loss, and for treating a neurodegenerative disorder in Paper No. 13 (18 April 2002) is acknowledged. The traversal is on the ground(s) that all four groups relate to a single general inventive concept. Applicant argues that the technical feature of Groups I-III is the potentiation of morphogen activity by releasing morphogen inhibition. Applicant contends that searching of the claims of Group I necessarily searches claims belonging to Groups II-III. Applicant argues that the inventions of Groups I-III can be efficiently searched and examined together. Additionally, Applicant's election of species in Paper No. 13 (18 April 2002) is acknowledged. Applicant asserts that the species subjected to restriction are encompassed by Markush groups. Applicant argues that the members of the Markush group are few in number and closely related so that search and examination of the entire claim can be made without a serious burden. This found persuasive in part because of the amended claims. Groups I, II, and III are rejoined. However, Groups I/II/III (rejoined) and IV still lack the same or corresponding technical feature. Groups I/II/III recite the administration of different compositions to a mammal, wherein the compositions potentiate morphogen activity. However, Group IV does not relate to a single inventive concept because the special technical feature of this group is

Application/Control Number: 09/509,648

Art Unit: 1647

providing a test cell with a morphogen inhibitory element, exposing the test cell to OP01 and a candidate molecule, and identifying a molecule capable of potentiating morphogen activity.

Groups I/II/III are unique and require a unique search of the prior art. Searching all of the groups in a single patent application would provide an undue search burden on the examiner and the USPTO's resources because of the non-coextensive nature of these searches. Furthermore, regarding Applicant's species traversal, upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141.

The requirement is still deemed proper and is therefore made FINAL.

Claims 13-15 and 27-32 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected group and species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 13 (18 April 2002).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claims 1-12 and 16-26 are under consideration in the instant application.

Applicant's amended claims are drawn to numerous species. Thus, further restriction is required, as follows:

 C_{\bullet}

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species of molecules that overcome morphogen inhibition are as follows:

- a. a cytokine antagonist
- b. a molecule that binds an endogenous ligand
- c. a cAMP-dependent messenger pathway inhibitor

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 5-8, 10-12, 16-18, 20-23, 25-26.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The special technical feature of (a) is a cytokine antagonist. This special technical feature is not shared by any other species.

Application/Control Number: 09/509,648 Page 5

Art Unit: 1647

3. This application contains claims directed to more than one species of the generic

invention. These species are deemed to lack unity of invention because they are not so linked as

to form a single general inventive concept under PCT Rule 13.1.

The species of receptor for an endogenous ligand (that a molecule binds) are as follows:

c. a cytokine receptor

d. a retinoid receptor

Applicant is required, in reply to this action, to elect a single species to which the claims

shall be restricted if no generic claim is finally held to be allowable. The reply must also identify

the claims readable on the elected species, including any claims subsequently added. An

argument that a claim is allowable or that all claims are generic is considered non-responsive

unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of

claims to additional species which are written in dependent form or otherwise include all the

limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species. MPEP

§ 809.02(a).

The following claim(s) are generic: 5-18 and 24-26.

The species listed above do not relate to a single general inventive concept under PCT

Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special

technical features for the following reasons:

The special technical feature of (c) is a cytokine receptor. This special technical feature is not

shared by any other species.

. . . •

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

If Applicant elects species (b), a molecule that binds an endogenous ligand, one species from the receptor group must also be chosen to be considered fully responsive.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bridget E. Bunner whose telephone number is (703) 305-7148. The examiner can normally be reached on 8:00-5:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Kunz can be reached on (703) 308-4623. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-4242 for regular communications and (703) 308-4242 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.
